Tree of life (biology) - Wikipedia

The tree of life or universal tree of life is a metaphor, model and research tool used to explore the evolution of life and the relatives of all living organisms, both living and extinct, as described in a famous passage in Charles Darwin's The Origin of Species (1859). The affinities of all of the beings of the same class have sometimes been represented as a great tree.

Space Biology Program | Science Mission Directorate

Space Biology research helps us understand the fundamental principles of plant growth by examining the very building blocks of plant life (down to the molecular level): transcription, genetics, proteins, and metabolisms. To compare the effects of microgravity conditions on plants, we also conduct experiments on Earth using gravity or weightless conditions.

Biochemistry and evolution of life science

12/12/2015 · Biology literally means “the study of life.” Life Sciences attempts to untie the living things mysteries from the working of protein ‘machines’, to the growth of organism from a single cell to the majesty and intricacy of whole ecosystem. Questions about life sciences are as diverse and interesting as the life they study.

Life (Standard Encyclopedia of Philosophy)

Life is defined in basic biology textbooks in terms of a list of distinctive properties that distinguish living systems from non-living. Although there is some overlap, these lists are often different, depending upon the interests of the author. Each attempt at a definition are intrinsically linked to a theory from which it derives its meaning (Runser 2010). Some biologist and

Biology Life in Soil | Soils 4 Teachers

What is soil? (article) | hubs to biology | Khan Academy

Soil is the surface layer of the Earth that supports plant life and serves as a habitat for many types of organisms. It is composed of particles that have been weathered from rocks and minerals, as well as organic matter from dead plants and animals. Soil is essential for the growth and survival of most plants and provides a medium for the deposition and accumulation of nutrients and other substances that are important to the health and productivity of the soil.
